

Annual Home Check List

The Consumer Protection Alliance is advising homeowners to think with safety first.

Follow the CPA Checklist to ensure your home is safe:

- Install smoke alarms and carbon monoxide detectors where appropriate and test them on a regular basis.
- Arrange for an annual safety check on the following gas appliances:
 - Boiler
 - Gas fires
 - Gas cooking hob
 - Hot water cylinder
- Carry out your own annual visual checks on plugs, sockets, cables, leads and light fittings and seek help from a registered electrician if you find any issues.
- Arrange for an inspection and test of electrical installations every five years, regardless of whether the property is owned or rented.
- When having a gas or electrical safety check carried out, always hire a registered, professional tradesperson such as those on the Gas Safe Register or those registered with NICEIC.
